

maricho PRODUCT DESIGN DOCUMENT

Skilled work you can **see, hire, and prove.**

Maricho turns informal trade work into something that leaves a trace — so a household can hire with confidence, an employer can staff a site in a morning, and a tradesman finally owns a record of everything he has built.

What Maricho is

Maricho is a hiring platform for skilled manual work. A household describes a problem and gets a verified tradesman at the door the same day. An employer describes a crew and gets one on site by Monday. And every completed job writes a permanent, evidenced entry into the worker's record.

01

A way to be hired

Workers publish what they can do — by voice, in their own language — set the areas they cover, and receive work that fits. No CV, no certificate, no office to walk into.

02

A way to hire

Buyers describe the problem, not the job title. Maricho returns three suitable people with their standing, their distance and a price band — and holds the money until the work is signed off.

03

A record that lasts

Every job produces dated photographs, a named client's confirmation and a rating. It belongs to the worker, travels with him, and is the reason his rate can rise.

The three problems it solves

PROBLEM	HOW IT SHOWS UP	WHAT MARICHO DOES ABOUT IT
Skill is invisible	A man has fitted two hundred geysers and can prove none of it, so a paper certificate he doesn't have outranks work he has done.	Issues evidence. Photographs, dates, a named client's sign-off, and an earned grade that rises with the work.
Trust is unverifiable	A buyer cannot tell a good tradesman from a confident one until the work is half done and half paid.	Verifies identity before anyone is bookable, publishes standing, inspects before quoting, and guarantees a redo.

PROBLEM	HOW IT SHOWS UP	WHAT MARICHO DOES ABOUT IT
Payment is unenforceable	"Come back on Friday." Fare spent, day lost, no leverage.	Holds a deposit from the moment of booking and releases the balance on sign-off.

THE SHAPE OF THE BUSINESS

Two kinds of buyer walk through two different doors into the same pool of verified workers. **Quick Hire** serves households and small businesses: one job, near me, soon. **Crew Hire** serves organisations: a named number of workers, a role, a date range, a site. A worker verified once is hireable through either.

Seven rules that settle arguments

Every unresolved design question in this document is decided by one of these. They are written to be usable — each says what to do, not what to believe.

01 Evidence beats assertion

Nothing in a profile is a claim. If it cannot be photographed, dated, or confirmed by a named person, it does not appear. This applies to skills, to job history, and to standing.

02 The person decides; the system explains

Maricho narrows and reasons. A human always chooses. Any shortlist, ranking or rejection the product produces must be accompanied by the reason for it, in words the affected person can read.

03 Design for the worker's worst day

The worker is the party with the least power and the most to lose. Where a decision is finely balanced — defaults, notifications, penalties, dispute handling — it resolves in his favour and we absorb the cost.

04 Money moves before trust exists

Nobody travels on a promise. A booking is not real until a deposit is held, and the worker is told so before he spends a cent on transport.

05 Location is a service area, never an address

Workers publish where they will travel to. The product shows suburbs and distance bands. A worker's home never appears on a map, and a job address is revealed only when both sides have accepted.

06 Speak first, type only if you want to

Every input that matters accepts a voice note in Ndebele, Shona or English. Typing is an option, never a requirement. A product that requires literacy excludes precisely the people it exists to serve.

07 Assume no power, no signal, no data

The phone is cheap, the bundle is small and the electricity is intermittent. The product works offline, syncs later, and never spends a megabyte the user did not ask it to spend.

Who this is built for

Five people. Each carries one fear that, unaddressed, makes them leave — and one moment that, if we land it, makes them stay.

Tendai Ncube, 24

WELDER & FABRICATOR • NKULUMANE • SUPPLY

	<i>"I don't need someone to tell me there is work. I need to know that if I go, I will be paid."</i>
SITUATION	Polytechnic practical completed, never placed. Owns a grinder, borrows the welder. Some weeks US\$80, some weeks nothing.
DEVICE	Entry-level Android. Buys US\$1 data bundles. WhatsApp is most of his internet.
FINDS WORK BY	Standing near a hardware store; four WhatsApp groups; waiting for an uncle to call.
FEAR	Not unemployment. Spending US\$2 on fare for a job that isn't real, and finishing work only to be told to come back Friday.
THE MOMENT	Opening his record and seeing twelve completed jobs, each with a photograph and a client's words underneath. Not "I found work" — "I can show someone."
LEAVES IF	He accepts fifteen jobs and wins none, or a single complaint costs him his income with no chance to answer.

Sithembile Ncube, 52

HOMEOWNER · HILLSIDE · QUICK HIRE

"I don't mind paying. I mind not knowing who is standing in my kitchen."

SITUATION	Geyser leaking into the ceiling. Needs it fixed today, not quoted next week.
HIRES BY	Posting in her neighbourhood WhatsApp group and hoping a neighbour vouches for someone.
BUYING	Not a plumber. Someone to be accountable to. She is outsourcing risk, not labour.
FEAR	Being overcharged because she cannot judge the work; being abandoned halfway; a stranger in her house.
THE MOMENT	A verified name, an ID-checked badge, a held deposit and a redo guarantee — all before anyone knocks. The anxiety converts into a booking.
LEAVES IF	We are slower or dearer than her WhatsApp group, or the guarantee turns out to be decorative.

Sipho Dube, 41

OPERATIONS MANAGER, FACILITIES CONTRACTOR · CREW HIRE

"Twelve bricklayers on site Monday. I care that twelve arrive on Thursday too."

SITUATION	Short-cycle contracts, headcount swinging weekly, penalty clauses when a site stalls.
STAFFS BY	Phoning a crew lead who brings a gang. Fast, opaque, and every risk sits with Sipho.
FEAR	Day-four attrition. Skill that turns out to be a claim. No paperwork when something goes wrong on site.
THE MOMENT	A roster showing twelve confirmed names, verified IDs, this morning's check-ins, and one invoice on Friday.
LEAVES IF	We under-fill once without telling him early enough to fall back on his crew lead.

Baba Moyo, 47

CREW LEAD · SUPPLY AGGREGATOR

"These young men eat because I find the work. What are you offering me?"

SITUATION	Holds a crew of about twenty and the client relationships that feed them. He is the existing infrastructure of this market.
HIS ROLE HERE	Crew lead. He registers a team; each member keeps their own individual record; he carries a team reliability score and a share of the Crew Hire fee.
FEAR	That we build on his network and then route around him.
THE MOMENT	His crew wins an order he could never have landed alone, and he is paid as its leader rather than erased from it.
WHY HE MATTERS	One signup can bring twenty verified workers and their reputations. He is the fastest honest route to supply.

Nomsa Sibanda, 31

DOMESTIC WORKER · RECURRING PLACEMENT

"I don't want five houses one time each. I want one house every Tuesday."

SITUATION	Pieces together days across several employers. Income depends entirely on relationships that can end without notice.
WHAT SHE NEEDS	A regular arrangement, a rate that isn't renegotiated weekly, protection against unpaid extra hours, and a way to answer a complaint before it costs her the work.
FEAR	Losing a placement over a misunderstanding she never got to explain.
THE MOMENT	A standing Tuesday booking that pays automatically, and a record showing eighteen months of unbroken service.
PRODUCT SHAPE	Her category is served by recurring placement , not one-off dispatch — matched once, then supported for as long as the arrangement lasts.

Six trades, one city

A hiring platform only works where it is dense. Six trades in Bulawayo, deep enough that any request gets three good answers within the hour, is worth more than eighty trades that each return one distant maybe.

A trade enters at launch only if it scores on all four tests: how urgently the buyer needs it, whether the ticket is large enough to carry a fee, whether the result can be photographed, and whether existing local supply is deep enough to fill demand from day one.

TRADE	URGENCY	TICKET	PHOTOGRAPHABLE	ROLE AT LAUNCH
Plumbing	Very high	Medium	Yes	The emergency trade. A burst pipe cannot wait for a referral, which makes it the cheapest demand to win.
Electrical	High	Medium	Partly	Safety-critical, so verification is worth real money to the buyer and grades mean something immediately.
Solar install & service	Medium	High	Yes	The growth trade. Intermittent grid power has made this the fastest-expanding skilled work in the country, with tickets large enough to carry the business.
Welding & fabrication	Low	Medium	Yes	The supply trade. Deep existing skill in the townships and visually striking output that makes records compelling.
Building, tiling & plastering	Low	High	Yes	The bridge trade. Multi-day jobs that lead naturally into crews and crew leads.
Appliance & refrigeration repair	High	Low–medium	Yes	The frequency trade. Small, repeatable jobs that teach the matching engine quickly and cheaply.

Two service models, because two kinds of work exist

DISPATCH

One job, one worker, one visit

The six launch trades. A problem appears, a person is matched, the work is done, the record is written. Priced per job against a published band.

RECURRING

A standing arrangement

Domestic and care work. Matched once, then supported: a fixed schedule, automatic payment, a rate that only changes by agreement, and a record of unbroken service. Enters once dispatch is stable, because it needs a different product, not a different category.

Seven objects

The whole system is these seven things and the relationships between them. Get these right and every screen becomes obvious.

FIG. 1 — A JOB IS THE TRANSACTION. A RECORD ENTRY IS WHAT THE JOB LEAVES BEHIND. STANDING IS WHAT THE RECORDS ADD UP TO.

A record entry is immutable

Once a client signs off, the entry cannot be edited or deleted by anyone, including Maricho. Corrections are appended, never overwritten. A record that can be quietly rewritten is not evidence.

Standing is computed, never assigned

No manual boosts, no paid placement, no favourites. Standing is a function of records and nothing else, and the function is published to workers in plain language.

Three surfaces

One system, three ways in. Each is designed around what that person opens it to do, and nothing else.

Five destinations each. If a sixth is proposed, something has to leave — a person under pressure cannot navigate a menu.

FIG. 2 — NAVIGATION. THE HIGHLIGHTED ITEM ON EACH SURFACE IS THE ONE THAT MUST LOAD FIRST AND WORK OFFLINE.

WhatsApp is a full channel, not a notification pipe

A worker can run his entire working life through WhatsApp without opening the web app: receive a job, accept it, say he is on his way, send completion photographs, confirm he was paid. The web app is richer — his record, his money, his settings — but nothing essential is locked inside it. Buyers can post a job and approve a quote the same way.

From a leaking ceiling to a line in a record

One job, twelve states, three parties. The money sits in the middle the whole way, and every failure branch is a designed outcome rather than an edge case.

FIG. 3 – NOTE THE INSPECTION STEP. THE WORKER PRICES THE JOB STANDING IN FRONT OF IT, WHICH REMOVES THE SINGLE LARGEST SOURCE OF DISAGREEMENT IN THIS TRADE.

When it goes wrong

Buyer cancels late

Deposit goes to the worker. He was ready; his day was held.

Worker doesn't arrive

Deposit refunded, standing marked, a standby offered within the hour.

Scope grows on site

A revised quote must be approved in-app before work continues. Unapproved extra work is never expected of anyone.

Buyer is unhappy

Money freezes, both sides give their account, and the default remedy is a free return visit rather than a refund.

What it feels like — the buyer

TRIGGER

Panic

Water coming through the ceiling.

DESCRIBES

Doubt

"Is this faster than asking my neighbours?"

CHOOSES

Weighing

Three names, three grades, three distances.

DEPOSIT

Committed

Money held, not gone. Someone is coming.

ARRIVAL

Relief

The face matches the name on the badge.

SIGN-OFF

Trust

It held. She saves him to My people.

What it feels like — the worker

ALERT

Sceptical

He has been sent to phantom jobs before.

SEES DEPOSIT

Reassured

The fare is covered whatever happens now.

CHECKS IN

Professional

He is expected. He is on a system.

PHOTOGRAPHS

Proud

The weld is good, and now it is proof.

PAID

Certain

Same day. No Friday. No asking twice.

RECORD GROWS

Visible

Job thirteen. Two more to reach journeyman.

Eight screens

Low-fidelity by intention — these fix hierarchy and wording, and visual design follows. Every one assumes a small phone, an expensive bundle, and a reader who may be in their second language.

SCREEN 01 • BUYER

Describe the problem

The entry point to the whole product. Someone with water coming through a ceiling will not complete an eight-field form, and a tradesman will never type a biography. Speak in, structure out.

- **What we heard is shown back as editable chips.** The system never silently interprets — the person always sees the understanding before acting on it.
- **A photo is a first-class input.** A picture of a leak is a better specification than a paragraph about one.
- **The same component onboards workers.** "Tell us what you can do" produces the skill profile from a voice note.
- Identical flow runs over WhatsApp for anyone who never opens the app.

SCREEN 02 · BUYER

Three people, and why

Three, never thirty. A long list hands the work of judging back to someone who came here precisely because they cannot judge.

- **The reasoning line is mandatory.** If we cannot say why these three, the match is not good enough to show.
- **Distance bands and suburb names, never pins.** Proximity ranks the list; it does not draw a map of where anyone lives.
- **New workers are labelled, not hidden.** A guaranteed share of shortlists goes to unproven people — otherwise nobody earns a first job and supply dies at the top.
- **The price band comes from completed comparable jobs,** so neither side is negotiating blind on a doorstep.

SCREEN 03 · BUYER

Booking and deposit

The moment of commitment, and the moment the product either earns trust or loses it. Everything on this screen exists to remove a reason to hesitate.

- **The fee is shown, not buried.** Ten per cent, stated, next to the guarantee it pays for.
- **The guarantee sits beside the payment button** because it is the actual product being bought at this instant.
- **The cancellation rule is written in plain words** before the money moves — ambiguity here becomes a dispute later.
- The balance is a range until inspection, and says so. A false precision now is a broken promise in an hour.

SCREEN 04 · WORKER

Work near you

Built around the worker's actual question, which is not "is there work" but "is this real". The money status answers it before anything else on the screen.

- **"Deposit secured" is the first line.** This single fact is what distinguishes Maricho from the group chats he is already in.
- **The band appears before he accepts,** so he never negotiates from ignorance in someone's driveway.
- **Light mode is a visible feature with a status.** Data costs him money and the product should show that it knows.
- **Passing costs nothing.** Declines never affect ranking. Penalising refusal is how a platform quietly coerces people into bad work.

SCREEN 05 · WORKER

On the job, offline

Where the record is actually made. It has to work in a house with thick walls, during load-shedding, on a phone with no bundle left.

- **Offline is a stated state, not a failure.** Check-in, photographs and quotes are captured locally and queued — the worker is told plainly that nothing is lost.
- **Photographs are captured during the job, not remembered afterwards.** Evidence gathered later is weaker and usually never gathered at all.
- **The quote is raised here, standing in front of the work,** and the buyer approves it before anything continues.
- **"Something is wrong here" is always available** — an unsafe property, an absent client, a job that isn't what was described. It stops the clock and reaches a person.

SCREEN 06 · WORKER

My record

The screen the product is named for. Everything here is evidence: dated, photographed, attributed to a person who confirmed it. Nothing here is a claim he made about himself.

- **Concerns are shown, not hidden.** Fourteen jobs and no open concerns is a far stronger signal than five stars, and a record that only carries good news is a brochure.
- **The next grade is always visible, with the money attached.** This is what makes building the record feel like building something.
- **Share my record produces a document** he can hand to an employer who has never heard of Maricho. The record is his, and it works outside our walls.
- Job locations show suburb names only, and appear on a map only where the client agreed.

SCREEN 07 · CREW HIRE

The roster

Sipho is not shopping. He is managing risk at seven in the morning on the fourth day of a contract. Fill status is the entire interface.

- **Day four is in the title.** Attrition after day three is what loses a site, and the product should look worried about it before he does.
- **The standby offer is where Crew Hire earns its fee.** Sourcing is a commodity; recovering an absence by 07:05 is not.
- **The crew lead appears as a lead,** with his own people beneath him. He is inside the system rather than routed around it.
- **The timesheet is the quiet reason procurement renews** — paperwork the client does not currently have.

11:15 4G

← Job on hold

The money is held, not lost
US\$32 stays with Maricho until this is settled.
Nobody has been charged or paid.

Mrs Ncube says
"The leak stopped but the ceiling board was not replaced."

YOUR SIDE OF IT

Speak, or add photos
Your job photos are already attached.

What happens next. Someone at Maricho reads both sides within 24 hours. Most cases end with a return visit.

Send my response

Your record is unchanged while this is open

SCREEN 08 · WORKER

When there's a disagreement

The screen that decides whether this product deserves the trust of the people it is built for. It is designed to the third principle without compromise.

- **He answers before anything happens to him.** No suspension, no ranking penalty, no mark on the record until a person has read both accounts.
- **His own job photographs are attached automatically.** He is not asked to prove his case from memory.
- **Speaking is enough.** A written-only appeal silently excludes the least literate workers, who are exactly the ones most likely to need one.
- **The default outcome is a return visit, not a refund.** The buyer gets a working geyser, the worker keeps his day's pay, and the record shows a resolved matter rather than a failure.

How a stranger becomes a known quantity

Trust is not a badge, it is a sequence. A worker climbs it by working; the platform's exposure to him rises as he does. The first two rungs are reachable without a single review, which is how anyone gets a first job at all.

EARNED STANDING → A HIGHER RATE BAND → A REASON TO KEEP BUILDING IT

FIG. 4 — EACH RUNG RAISES WHAT A WORKER CAN CHARGE. STANDING IS BUILT BY WORKING THROUGH MARICHO AND IS ONLY WORTH MONEY HERE, WHICH IS WHAT MAKES THE PLATFORM WORTH RETURNING TO.

Ratings run both ways

Buyers rate workers. Workers rate buyers — on paying, on scope, on how they were treated. A buyer with a pattern of unpaid extras stops being offered people.

Answer before consequence

A single complaint never removes anyone. Standing is frozen, not damaged, while a person reads both accounts and decides.

Everyone gets seen

A fixed share of every day's shortlists goes to identified workers with little history, and a cooldown stops the same five people taking everything.

Address discipline

A job address appears when both sides accept. A worker's home appears nowhere, to nobody, at any point.

Both people are safe

In-app help for either party, next of kin on file, and a number a person answers. A woman entering a stranger's property is protected as carefully as the household she enters.

The guarantee

Work that isn't right is put right at no extra cost. It is what a buyer is really paying the fee for, and it is why she chooses us over asking a neighbour.

How value moves

Holding

A booking is real when a deposit is held. The deposit is sized to cover travel plus a meaningful share of a day's earnings, so cancelling late costs something and travelling is never a gamble. The balance is committed when the quote is approved and released on the day the buyer signs off — same day, to EcoCash or InnBucks, with a receipt in the record.

EXPECTED PATH

EVERY BRANCH IS SHOWN TO BOTH PARTIES BEFORE THEY COMMIT

FIG. 5 — FORFEIT RULES ARE PUBLISHED AT THE POINT OF BOOKING. AMBIGUITY ABOUT MONEY IS THE RAW MATERIAL OF DISPUTES.

Pricing

Maricho publishes a **band** for every job type, computed from completed comparable jobs in that suburb. The worker prices within the band; his grade lifts its ceiling. Neither party negotiates blind, nobody can be pushed beneath the floor, and a worker who improves earns more without having to argue for it. Above a set value, the quote is issued after the worker has inspected the job in person — never from a photograph.

Who pays

Quick Hire

A percentage of the job, charged to the buyer and disclosed before booking. It buys the verification, the held money and the guarantee.

Crew Hire

A placement fee or a monthly subscription, invoiced to the organisation. Fill rate and attendance records are what renews it.

Never the worker

Nothing to register, nothing to apply, nothing to be shortlisted. A platform that charges the people with the least money selects for desperation, not skill.

TO CONFIRM WITH A PAYMENTS PARTNER

Holding buyers' funds in Zimbabwe will most likely run on a licensed rail — a mobile money merchant arrangement or a bank partner — rather than Maricho holding balances directly. This conversation should happen before the flow is finalised, because the answer shapes it.

How three names get chosen

Matching is the least visible part of the product and the one that most determines whether it feels fair. Four inputs, one hard rule, and an explanation attached to every result.

01

Can they do it

Meaning is matched, not keywords. "Someone to sort out a leaking geyser" should reach plumbers and refrigeration technicians alike, because that is who can actually help.

02

Can they get there

Declared service area first, distance second. How he travels matters more than how many kilometres — a man with a bicycle and a man with a bakkie do not have the same eight kilometres.

03

Are they free

Real availability, not an optimistic setting. Someone already on a job in another suburb is not a match, however good.

04

Have they done it before

Standing and relevant record entries. Weighted, never decisive — otherwise the same five people take everything and nobody new is ever hired.

THE RULE THAT GOVERNS ALL OF IT

If we cannot say why, we do not show it. Every shortlist carries its reasoning to the buyer. Every worker can see why he was not shortlisted and what would change that. A ranking that decides who earns this week must be answerable to the people it ranks.

What the machine is for, and what it is not for

It does this

- Turns a spoken description into a structured profile or job specification
- Understands meaning across languages and informal trade vocabulary
- Narrows hundreds of people to three, with reasons
- Notices duplicate accounts, recycled photographs and false claims
- Drafts the record entry from the job's own evidence, for the worker to approve

It never does this

- Choose who is hired
- Remove someone from the platform
- Decide a disagreement between two people
- Set a price with no band and no explanation
- Rank anyone by anything it cannot put into words

Designed for the phone in his hand

Every one of these is a design input, not an excuse. A product that assumes a good phone, a strong signal and constant power is a product for people who already have options.

An inexpensive Android

Small screen, little storage, an old browser.
A progressive web app, no install required,
everything reachable with one thumb.

A small data bundle

Light mode by default: text first, images on
request, photographs compressed on the
device before they are sent. Data spent is
data the user chose to spend.

Power that comes and goes

Work continues offline. Check-ins,
photographs and quotes queue locally and
send when the signal returns, with the
pending count always visible.

Three languages

isiNdebele, chiShona and English
throughout, including notifications, receipts
and disputes. Trade vocabulary follows
local usage rather than translation.

Mixed reading confidence

Speech accepted everywhere it matters.
Icons always paired with words. Numbers,
times and money written the way people
say them.

WhatsApp is home

For many workers it is the internet. The full
working cycle runs there, so the app is an
upgrade rather than a barrier.

How the product speaks

RULE	NOT THIS	THIS
Name things by what the person controls	"Manage service radius parameters"	"Where you will travel to"
Say what a button does	"Submit"	"Pay US\$5 and book"

RULE	NOT THIS	THIS
Keep the word through the flow	Book → "Request created"	Book → "Booked"
Explain a failure and the way out	"An error occurred"	"That didn't send. It's saved — we'll try again when you have signal."
An empty screen invites	"No jobs found"	"No work near you yet. Add another suburb and more will reach you."
Never make money vague	"Fees may apply"	"US\$5 now, the rest after you sign off. Our fee is 10%, already included."

What good looks like

Eight numbers. Between them they describe whether the marketplace is real, whether it is fair, and whether the record is worth anything.

MEASURE	MEANING	TARGET BY MONTH SIX
Fill rate	Requests that put a worker at the door	Above 85%
Time to accept	Request to a worker saying yes	Under 30 minutes for urgent trades
Buyers who come back	A second booking within 90 days	Above 35%
Workers earning properly	Share of active workers with four or more paid jobs a month	Above 40%
Spread of earnings	Share of all payouts reaching the busiest tenth	Below 40%
Jobs put on hold	Disagreements as a share of jobs	Below 6%
Worker responses upheld	Held jobs decided wholly or partly for the worker	Tracked — near zero means the process is decorative
Records shared	Workers sending their record outside Maricho	Tracked — the first proof it has value beyond us

NOT A MEASURE

Registered workers. Signing people up is easy, costs nothing and proves nothing. A hundred workers each doing four jobs a month is a business. Five thousand workers waiting for a job that never comes is a directory of disappointed people.

Three stages, each ending in a decision

Stages end when they are proven, not when the calendar says so. If a stage does not reach its mark we repair it rather than adding scope on top of a weak foundation.

STAGE ONE

Make one trade work in a few suburbs

- Web app and WhatsApp channel
- Plumbing and electrical only
- Two or three suburbs
- Identity, record, deposit, sign-off, disagreements
- Crew orders filled by hand, by a person
- Supply recruited through crew leads and the polytechnic

MOVE ON WHEN

Fill rate above 85% and buyers returning above 35%, held for eight straight weeks.

STAGE TWO

Widen the city, build the crew product

- The remaining four trades
- All of Bulawayo
- Crew Hire console, built from what the manual work taught us
- Crew lead team accounts
- Grades and rate bands live
- Domestic and care work, as recurring placement

MOVE ON WHEN

Three organisations ordering crews repeatedly, and each Quick Hire job paying for itself.

STAGE THREE

Make the record valuable elsewhere

- A second city
- Shareable verified records for outside employers
- Tool finance and insurance written against standing
- Training institutions feeding verified graduates in
- Native apps once reliable alerts justify them

PROVEN WHEN

An outside party — a lender, an insurer, an employer — acts on a Maricho record. That is the whole idea, confirmed.

Trade roadmap

The full range of skilled work Maricho is built to carry, ordered by when each cluster becomes viable. Depth comes first; breadth follows the density that depth creates.

STAGE ONE

Launch trades

Plumber · Electrician · Solar technician and installer · Welder and metal fabricator · Bricklayer, tiler and plasterer · Refrigeration, air-conditioning and appliance technician

STAGE TWO

Property, trades and site support

Carpenter · Painter and decorator · Glazier · Roof leak repairer · Paver · Fence erector · Builder's assistant · Trencher · Machine operator · Forklift operator · Motor mechanic · Panel beater · Spray painter · CCTV and security systems installer · Solar panel cleaning · Gardener · Landscaper · Tree cutter · Grass cutter · Window cleaner · Waste collector · Street sweeper

STAGE TWO

Domestic and care · recurring placement

House help · Laundry · Babysitter · After-school carer · Crèche assistant · Dog walker · Car washer

These enter as recurring placements, with a full safety review and a live response process — never as one-off dispatch. The work is a relationship, and the product has to be one too.

Hospitality, retail, logistics, events and creative

Chef · Cook · Baker · Butcher · Barman · Doorman · Bouncer · Shop sales assistant · Hardware salesperson · Tuck shop assistant · Market trader · Vegetable vendor · Fuel attendant · Packer · Trolley and cart pusher · Kombi assistant · Messenger · Executive driver · School run driver · Designated driver · DJ · Musician · Session singer · Photographer · Content creator · Actor · Tailor · Seamstress · Garment maker · Cobbler · Hairdresser · Barber · Sculptor · Personal assistant · Farm worker · Agricultural technician · Artisanal mining personnel
